Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE OF INVENTION: LUCIFERASES, FLUORESCENT PROTEINS, NUCLEIC ACIDS ENCODING THE LUCIFILE OF INVENTION: AND FLUORESCENT PROTEINS AND THE USE THEREOF IN DIAGNOSTICS, HIGH TITLE OF INVENTION: SCREENING AND NOVELTY ITEMS

FILLE OF INVENTION: SCREENING AND NOVELTY ITEMS

FILLE OF INVENTION: SCREENING AND NOVELTY ITEMS

CURRENT PAPLICATION NUMBER: US/09/609,161B

PRIOR APPLICATION NUMBER: US/077,716

PRIOR FILING DATE: 1999-03-26

PRIOR FILING DATE: 1998-10-01

PRIOR FILING DATE: 1998-06-15

PRIOR FILING DATE: 1998-06-15

PRIOR FILING DATE: 1998-06-15

US-US-4/3-645A-12

Sequence 12, Application US/09479645A

Patent No. 6489141

GENERAL INFORMATION:

APPLICANT: FRAZER, Ian Hector

APPLICANT: FRAZER, Ian Hector

TITLE OF INVENTION: INCLEIC ACID SEQUENCE AND METHOD FOR SELECTIVELY

TITLE OF INVENTION: EXPRESSING A PROTEIN IN A TARGET CELL OR TISSUE

FILE REFERENCE: 210338, 0001/1US

CURRENT PILING DATE: 10338, 0001/1US

CURRENT PILING DATE: 1998-07-09

PRIOR PILING DATE: 1999-07-09

PRIOR PILING DATE: 1997-07-09

PRIOR PILING DATE: 1997-09-11

NUMBER OF SEQ ID NOS: 219

SOFTWARE: PATENTIN VOIL 2.0

SOFTWARE: PATENTIN VOIL 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              16 VELDGDVNGHKRESVSGEGEGDATYGKLTLKFICTT-GKLPVPWPTLVTTFSYGVQCFSRY

Patent NO. 6670449
GENERAL INFORMATION:
APPLICANT: GERO MIESENBOCK, ET AL.
TITLE OF INVENTION: HYBRID MOLECULES AND
TITLE OF INVENTION: HYBRID USE FOR OPTICALLY DETECTING CHANGES IN
CELLULAR MICROENVIRONMENTS

                              This sequence is the direct result of the Base calling software Phred (default parameters). It is the raw base calls. To aid in the identification of the high quality insert the software Lucy (default parameters) has been run on this sequence. Lucy identified the region [124,600].

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Were www.genoscope.cns.fr)
Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

1st strand of CDNA was synthesized with reverse transcriptase and cligo (dT) beads, then CDNA was amplified by PCR using modified SMART primers: The final CDNA was cloned in pAMPI vector in ammealing reaction with Uracil DNA Glycosylase (UDG). Library constructed by Y. Korshunova and M. Lovett. Library materials provided by Mills JC & Gordon JI.

                                                                                                                                            - Web: www.genoscopen.com. The state of a collaboration with the Barkeley Drosophila Genome Project (BDGP). Determination of this BAC-end sequence was carried out as part of collaboration with the Barkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcokI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGPs and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualifiers

Sfil (ggccattatggcc); Site_2: Sfil (ggccgcctcggcc);
Library is oligo-dT primed and directionally cloned. cDNA
was prepared from a glandular pool of tissues from thyoid,
parathyroid, adrend, cortex and pineal gland. 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGCCATTATGGCC'3' and 3' adaptor sequence:
5'-ATTCTAAAGGCGCGACGAATG-dT(30) BN-3' (where B = A,
C, or G and N = A, C, G, or T). Average insert size 1.38
kb (range 0.60-3:5 kb): 15/15 colonies contained inserts
by PCR. This library was enriched for full-length clones
and was constructed by Clontech Laboratories (Palo Alto,
CA). Note: this is a NIH_MGC Library."

Oncean Dady, Vector: pDNR; Site 1: Sfi1; Site 2: Sfi1; CABUD is a cDNA library of Vitis vinifera cv. Cabernet Sauvignon. Clone 8 dissected buds. Samples were collected May 13, 2002 from pre-bloom plants (10-11 days before bloom), pre-veraison. Sampled vines were located at the University of California, Davis, Experimental Vineyard. cDNAs were made by oligo-dr priming and directionally cloned. 5'and 3' adaptors were used in cloning as follows.
5'-AAGCAGTGGTACAACGCAGAGTGGCCATTACGGCGGG-3' and 5'-AAGCAGTGGTACAACGCAGACTGGCATGGCGTGGTATA. Library was
                                                                                                                                         .

99AU-00008463 s; Dove (UNSY) UNIV SYDNEY. Hoegh-Guldberg O, 02-FEB-1999;

WPI; 2000-532892/48. P-PSDB; AAY97149.

Novel pigment protein derived from corals capable of emitting fluorescence upon irradiation by incident light useful as tissue marker, fluorescent marker or general dyestuff.

Claim 10; Page 44; 49pp; English.

cDNA libraries were constructed from a blue pigmented coral, Acropora aspera to isolate sequences encoding polypeptides with N-terminal

sequences as shown in AAY97147-48. Pigment protein from coral tissue (PPCT) is capable of emitting fluorescence upon irradiation by incident light whose maximal absorbance is in the range of 320-600 nm and a maximal fluorescence emission is in the range of 300-700 nm. PPCT may be used as a tissue marker, fluorescent marker (e.g. to follow gene expression in transformed tissues) for general dysetuff (all claimed). PPCT may also be used in sunscreen formulations or UV filters (both
